

Yamaha GEN2 V-Max
Integrated Tail Light Assembly, Wrap Around LED Fork Turn Signals,
LED Turn Signal/Hazard Light Relay and Dual Element Circuits
After Modifications

Note:
 All Components, Wires and Solder Points in RED are modifications required to ensure that the Integrated LED Taillight Assy and Wrap Around Fork LED Turn Signals work as closely to the OEM Taillight and Front/Rear Turn Signals, as possible, preventing the ABS light from coming on erroneously and to alleviate the turn signals from flashing too quickly.
